Descriptive paired-question judgement transitions
B: G0 -> G1; excluded unknown pairs=18
V correct on G0 answer
V wrong on G0 answer
a = 90
b = 27
c = 37
d = 28
V correct on new answer
V wrong on new answer
B: G0 -> G2; excluded unknown pairs=23
V correct on G0 answer
V wrong on G0 answer
a = 91
b = 22
c = 31
d = 33
V correct on new answer
V wrong on new answer
C: G0 -> G1; excluded unknown pairs=5
V correct on G0 answer
V wrong on G0 answer
a = 41
b = 13
c = 14
d = 23
V correct on new answer
V wrong on new answer
C: G0 -> G2; excluded unknown pairs=7
V correct on G0 answer
V wrong on G0 answer
a = 41
b = 12
c = 14
d = 22
V correct on new answer
V wrong on new answer
Candidate index 0 only. Different G answers and truth can occur. These are NOT fixed-answer verifier-forgetting matrices.
